Operational correlation limit at matched supercriticality
Plateau-qualified sustained probability
Monotone fit
Threshold = 0.5
$\varepsilon_{max} = 0.367$
Sustained-transition probability
Correlation parameter ε
Critical and matched evaluation gains
$\hat{\kappa}^{\varepsilon}_{crit}$
$\kappa^{\varepsilon}_{eval}$
Orthogonal scalar-map critical gain
Gain κ
Correlation parameter ε
Escape time with $\kappa^{\varepsilon}_{eval} > \kappa^{\varepsilon}_{crit}$
Raw correlated patterns
Orthogonal map at matched gain
Asymptotic T_{esc}
Correlation parameter ε
Terminal saliency amplitude at matched gain
Raw correlated patterns
Orthogonal map at matched gain
Asymptotic $\bar{Z}$
Correlation parameter ε
